## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/17/08 has been entered.

### ***Response to Arguments***

2. Applicant's arguments with respect to claims 1 and 23 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 23 are rejected under 35 U.S.C. 102(b) as being anticipated by Tirkkonen et al ("Minimal Non-Orthogonality rate 1 Space-time block code for 3+ Tx Antennas", Spread Spectrum Techniques and Applications, 2000 IEEE Sixth

International Symposium on, Publication Date: 2000, Volume: 2, On page(s): 429-432 vol.2).

Re claim 1, Tirkkonen discloses receiving content for transmission from a plurality of three or more transmit antennae (abstract, it would be inherent to receive the transmitted block code); and

generating a rate-one, space-frequency code matrix from the received content for transmission via the plurality of three or more transmit antennae (table 1, layered 4x4 coding scheme achieving rate 1).

Re claim 23, Tirkkonen discloses a method wherein the plurality of three or more transmit antennae provide full space-frequency diversity of  $M \times N \times L$  (table 1, layered 4x4), where M is number of transmit antenna (4 transmit antennas), N is number of receiver antenna (1 receive antenna), L is order of frequency selective channel (Diversity 4).
